

- Quantify counts, lengths, and areas from scaled drawings
- Easily navigate to plan details
- Print or e-mail color-coded takeoffs
- Color-coded takeoffs for presentation or job coordination
- Zone an area or phase of work for cost separation
- Digital storage for all plans and takeoffs
- Full integration with Excel
- Insert change order drawings and paste current takeoff to show changes with electronic drawings
- Program opens image files as well as most CAD drawing formats

Generate accurate and precise quantity takeoffs!

Generate accurate and precise quantity takeoffs using the cutting edge technology of On-Screen Takeoff®. On-Screen Takeoff can be used with traditional paper plans and a digitizer or with electronic plans. Use your mouse (or digitizer pen) to quantify lengths, areas, volumes, and perform counts right on your computer screen. This program is well-suited for General Contractors, Subcontractors, and Project Managers alike.

Eliminate the guesswork and put an end to countless hours of manual takeoff labor. Let On-Screen Takeoff simplify your takeoff process and give you confidence in your numbers.

Print your takeoff with the click of your mouse.

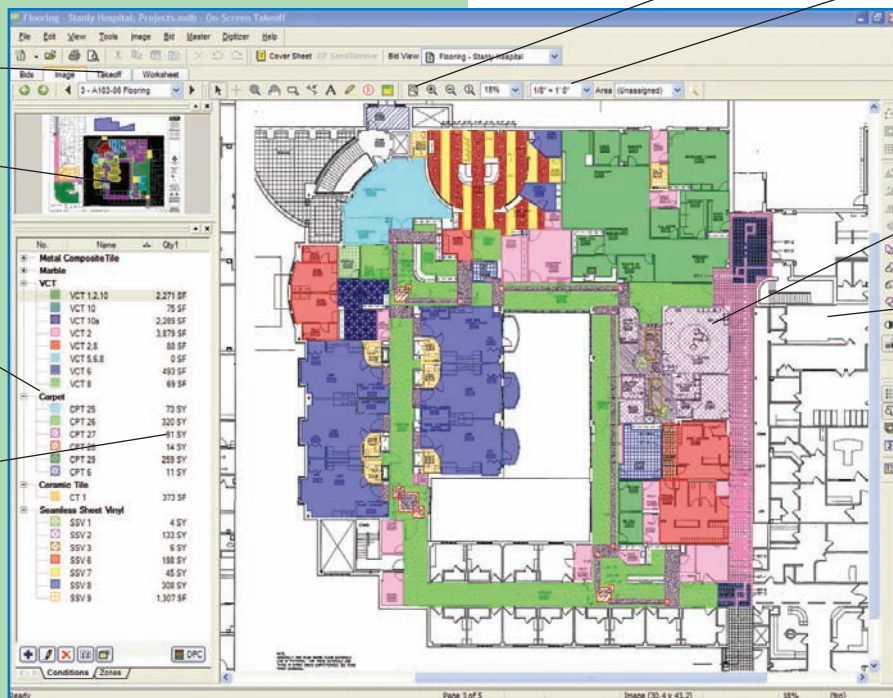

Choose present scales or customize your own.

Smart toolbars make the program easy to use.

Navigation window allows you to track where you are in your takeoff - never lose your place in a drawing again.

Automatically groups conditions by type.

Easily quantify lengths, areas, volume, and drops and runs.

New areas functionality allows grouping conditions to do room-by-room takeoffs.

With electronic plans, view the drawing in the background and takeoff right on top of it. Also works with a digitizer and paper plans.
